TAREFA 1 NTLite

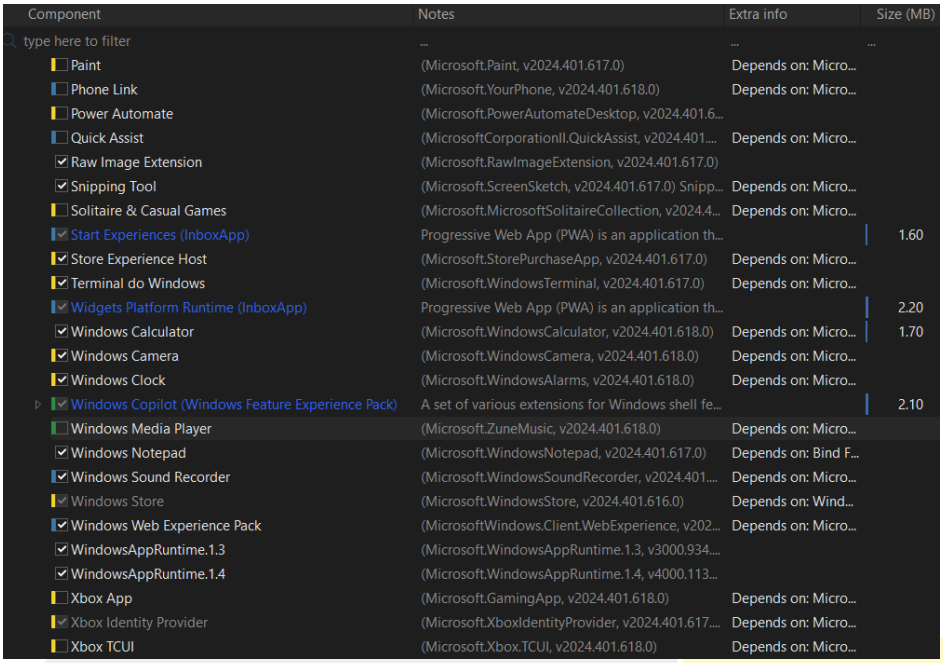

Print das alterações feitas no NTLite

Nesta fase, procedeu-se à limpeza do sistema operativo através da remoção de componentes não essenciais para um ambiente de servidor ou produtividade. Foram removidas aplicações nativas (bloatware) como jogos, serviços Xbox e ferramentas de entretenimento.

Allow Telemetry Security | Dis...

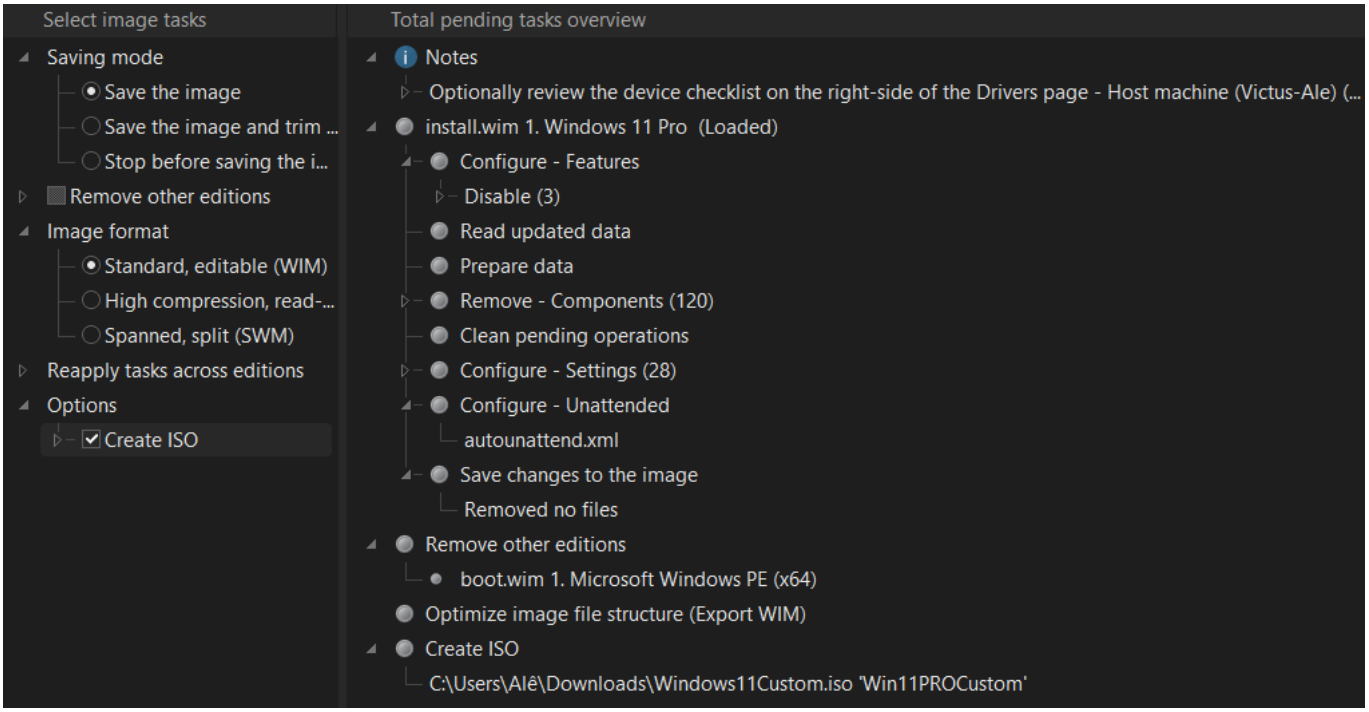

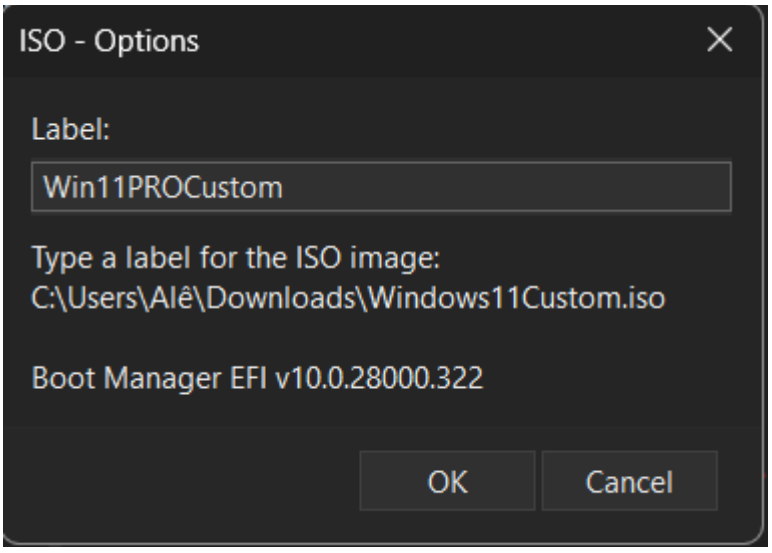

Com foco na segurança e privacidade, foram desativados diversos serviços de recolha de dados e telemetria da Microsoft. Configurou-se o nível de telemetria para o mínimo possível ('Security') e bloqueou-se o acesso de aplicações a dados sensíveis como histórico de chamadas, contactos e localização.

Bruno Faria

Print da criação do ISO

Foram aplicados 28 ajustes de configuração para melhorar a experiência do utilizador. Destacam-se a ativação do Modo Escuro em todo o sistema, a implementação do Menu de Contexto Clássico (botão direito antigo) e a exibição automática de ícones essenciais no ambiente de trabalho, como 'Este PC' e a 'Reciclagem'.

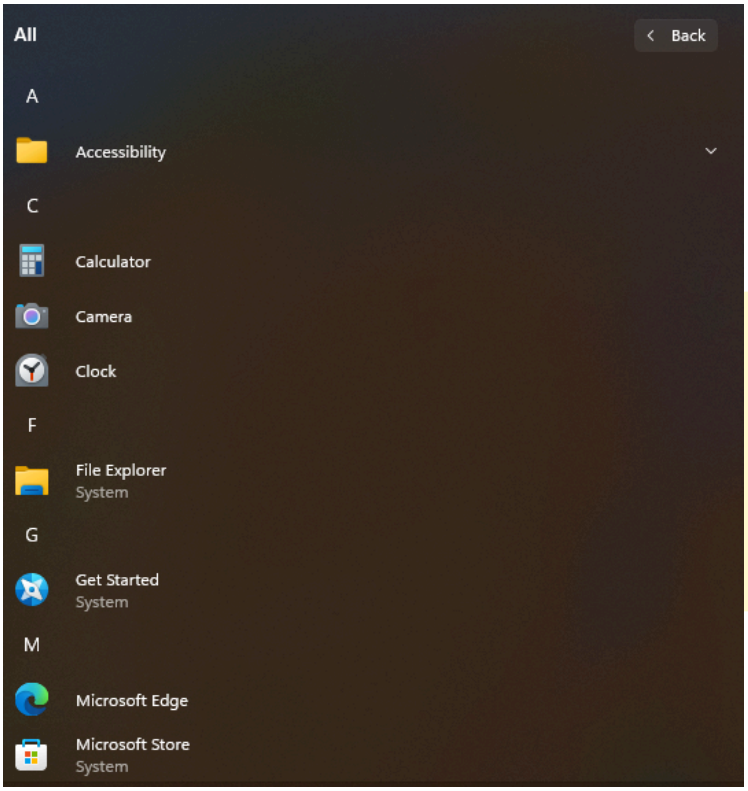

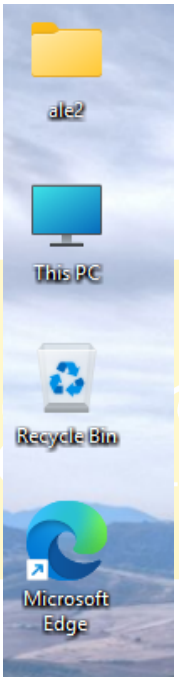

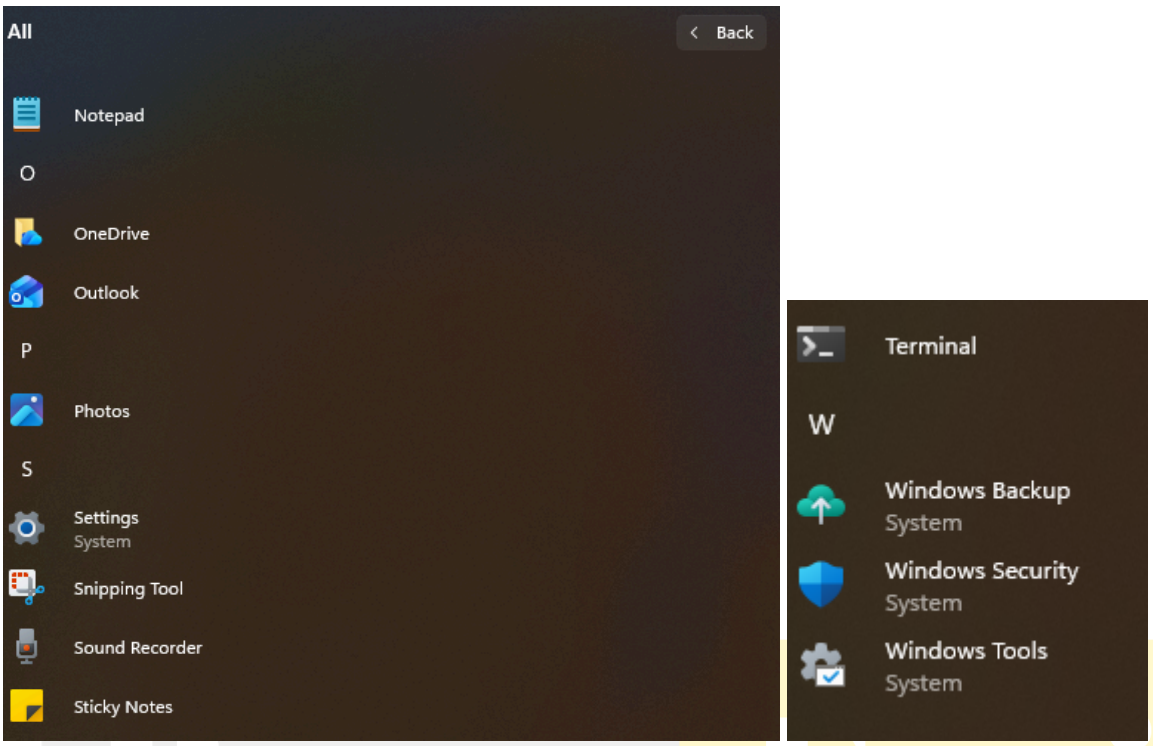

Após a conclusão de todas as parametrizações, foi gerada uma nova imagem ISO denominada **'Win11PROCustom'**. Este ficheiro contém todas as modificações efetuadas, pronto para uma instalação automatizada na máquina virtual.

Print do Windows personalizado instalado (na VM) com evidencias que está alterado (lista de aplicações, configurações alteradas)

As imagens seguintes demonstram o sucesso da instalação na VM. É possível verificar o sistema operativo com um menu inicial extremamente limpo, a presença dos ícones personalizados no desktop e o funcionamento do tema escuro e menu clássico, validando as alterações feitas previamente no NTLite.
